

Girls enrolled in school are less likely to become pregnant as teenagers. Between 1990 and 2014, every region has seen an increase in the share of girls enrolled in secondary school, and a decline in adolescent fertility rates.

Adolescent fertility rate by country (births per 1,000 women ages 15–19)

- East Asia & Pacific
- Latin America & Caribbean
- North America
- Sub-Saharan Africa
- Europe & Central Asia
- Middle East & North Africa
- South Asia
